TO: Laboratory Supervisors

FROM: Dennis Edwards

RE: Laboratory Safety

This note is to remind you to provide your students and others working with you or for you with the information and/or training they need to work safely this summer. Again this year, we have a large number of students working in laboratories for extended periods of time. It is even more important to review and emphasize prudent practices during this period.

Laboratory Supervisors have a responsibility to ensure that the hazards associated with their research or other projects are evaluated so that procedures are selected to minimize the hazards identified. For a detailed description of your responsibilities as a Laboratory Supervisor, please review our Chemical Hygiene Plan. The Chemical Hygiene Plan can be viewed on-line at <http://www2.colgate.edu/offices/chemmgt/CHP/index.htm>.

As always, I am available to provide training and information to help you teach science safely. Please let me know how I can be of assistance.

CC: Rich April
